Contents

Bot	Framewoi	rk SDK	docume	ntation

Overview

What is the Bot Framework SDK?

What's new

Quickstart

Create a bot using .NET

Create a bot using JavaScript

Create a bot using Python

Create a bot using Azure Bot Service

Tutorials

- 1. Create a basic bot
- 2. Deploy a basic bot
- 3. Add QnA Maker and redeploy a bot

Samples

Bot Framework samples repo on GitHub

Security

Security baseline

Bot Service encryption

Authentication basics

Authentication types

User authentication

User authentication basics

Identity providers

Single sign on

Add authentication to a bot

Add single sign on to a bot

Enhanced authentication

Security guidelines

Concepts

```
Bot
   How bots work
   Managing state
   Event-driven conversations
   Dialogs library
   Waterfall dialogs
   Middleware
   Understand the structure of an echo bot
 Adaptive dialogs
   Introduction to adaptive dialogs
   Events and triggers in adaptive dialogs
   Actions in Adaptive Dialogs
   Asking for user input using adaptive dialogs
   Recognizers in adaptive dialogs
   Language Generation in adaptive dialogs
   Memory scopes and managing state in adaptive dialogs
   Handling interruptions in adaptive dialogs
   Using declarative assets in adaptive dialogs
   Cross training your LUIS and QnA Maker models
 Manage bot resources
 How bots for Microsoft Teams work
 Skills
   About skills
   About skill bots
   About skill consumers
 Adaptive expressions
 Language Generation
How-To
 Design
   Principles of bot design
   First interaction
   Design bot elements
```

```
Design and control conversation flow
   Design bot navigation
   Design the user experience
 Patterns
   Knowledge base
   Handoff to human
   Bots in apps
   Bots in websites
Develop
 Send and receive text message
 Add media to messages
 Add buttons to guide user action
 Save user and conversation data
 Prompt users for input
 Send welcome message to users
 Send proactive notifications to users
 Manage a long-running operation
 Implement sequential conversation flow
 Manage dialog complexity
 Create advanced conversation flow using branches and loops
 Handle user interruptions
 Expire a conversation
 Language understanding
  LUIS
    Add natural language understanding to your bot
    Deploy LUIS resources using LUIS CLI commands
    Update LUIS resources using LUIS CLI commands
   OnA Maker
    Answer user's questions using QnA Maker
    Deploy QnA Maker knowledge base using CLI commands
    Customized lists of synonyms in QnA Maker
   Use multiple LUIS and QnA models
```

```
Adaptive dialogs
   Create a bot project for adaptive dialogs
   Create a bot using adaptive dialogs
   Create a bot using adaptive, component, waterfall, and custom dialogs
   Handle user interruptions in adaptive dialogs
   Create a bot using declarative adaptive dialogs
   Cross train a bot to use both LUIS and OnA Maker
 Write directly to storage
 Implement custom storage for your bot
 Language Generation
   Use language generation templates in your bot
   Use custom functions in language generation
 Skills
   Implement a skill
   Write a v2.1 skill manifest
   Write a v2.0 skill manifest
   Use dialogs within a skill
   Implement a skill consumer
   Use a dialog to consume a skill
 Add telemetry to your bot
 Add telemetry to your QnA bot
 Analyze your bot's telemetry data
 Use Direct Line Speech in your bot
Test
 Unit testing bots
 Add trace activities to your bot
Debug
 Debug a bot using IDE
 Debug with the Bot Framework Emulator
 Debug a bot from any channel using ngrok
 Debug a skill or skill consumer
```

Debug a bot with inspection middleware

Debug your bot using transcript files Debug your bot with Adaptive Tools Deploy Deploy your bot to Azure Set up continuous deployment Manage Manage a bot Bot channels registration Bot analytics Configure bot settings Configure speech priming Channels Connect a bot to channels Implement channel-specific functionality Cortana (retired) Direct Line About Direct Line Connect to Direct Line Connect to Direct Line Speech Direct Line App Service Extension Configure .NET bot for extension Configure Node.js bot for extension Create .NET Client with extension Use extension with WebChat Use extension within VNET Alexa **Fmail** Facebook GroupMe Kik LINE Microsoft Teams
